Liquid air energy storage (LAES) is an emerging technology where electricity is stored in the form of liquid air at cryogenic temperature. The concept of using liquid air for electric energy storage was first proposed in 1977 [9]. Several years later, several companies actively carried out research on LAES technology in Japan, such as Mitsubishi Heavy Industries and ...

As a new paradigm of energy storage industry under the sharing economy, shared energy storage (SES) can effectively improve the comprehensive regulation ability and safety of the new energy power system. However, due to its unclear business positioning and profit model, it restricts the further improvement of the SES market and the in-depth exploration of the economic benefits ...

One of the most straightforward CFPP retrofitting schemes is to integrate carbon capture and storage (CCS) technologies, thus eliminating direct CO<sub>2</sub> emissions. According to the stage of carbon capture, the operating principles of CCS are classified as pre-combustion, oxy-fuel combustion, and post-combustion [6], among which the post-combustion type is the most ...
