

Will China get into battery swapping?

XIAMEN,China (AP) -- The world's largest maker of batteries for electric vehicles said Wednesday it will get into battery swapping in China in a big way starting next year. The idea behind battery swapping is to refuel quickly,similar to filling a conventional car with gas.

Can an electric car use a battery swapping station in China?

An electric vehicle has to be equipped with the right technology in order to use a battery swapping station,and not many EV models around the world currently allow for swapping. Conversely,an electric car can use any charging stationin China because all use a common plug,and fast-charging technology is reducing the time for a recharge.

How many battery swap stations are there in China?

The company aims to establish 1,000 battery swap stations across China, including in Hong Kong and Macau, with a long-term objective of building 10,000 stations in collaboration with its partners. Battery swapping offers a rapid alternative to traditional EV charging.

Should China adopt a standard battery pack?

Jing Yang, a Fitch Ratings director who focuses on China's auto and renewable energy sectors, said automakers may be concerned that adopting a standard battery pack could cede too much control of their supply chain to others.
