

Can a solar scooter extend its range?

The scooter is shrouded in two large solar panels that Otherlab says can extend its range by an extra three miles for every hour it's left in the sun. The company, which describes itself as an "independent research & design lab" bringing "new solutions in renewable energy," is planning to make the Lightfoot available for preorder starting today.

Should you buy a Lightfoot electric scooter?

For those who like the idea of commuting to work, or even running errands, using an electric scooter but are anxious about the risk of being stranded by their relative limited ranges, the Lightfoot could bring some peace of mind.

How big is a Lightfoot vs a stand up scooter?

With a frame made from aircraft-grade aluminum riding on 10-inch tires, the Lightfoot is bulkier than stand up scooters, but it can accommodate two riders. Underneath those solar panels you'll also find 1.5 cubic feet of weatherproof and lockable storage which the company says is "comparable in size to a carry-on suitcase."

How far can a Lightfoot scooter go in the summer?

The Lightfoot scooter's 120W solar panels can extend its range by up to 20 miles in the Summer, its creators claim. Andrew Liszewski is a senior reporter who's been covering and reviewing the latest gadgets and tech since 2011, but has loved all things electronic since he was a kid.

While some scooters, like Honda's Motocompacto, are designed to fold up so you can store them inside, the Lightfoot will benefit from being left outdoors. Beneath the Lightfoot's solar panels...
