

# Sodium-sulfur battery demonstration energy storage power station

Can sodium sulfur battery be used in stationary energy storage?

Sodium sulfur battery is one of the most promising candidates for energy storage applications. This paper describes the basic features of sodium sulfur battery and summarizes the recent development of sodium sulfur battery and its applications in stationary energy storage.

What is a sodium sulfur battery?

Sodium sulfur battery is one of the most promising candidates for energy storage applications developed since the 1980s. The battery is composed of sodium anode, sulfur cathode and beta-Al<sub>2</sub>O<sub>3</sub> ceramics as electrolyte and separator simultaneously.

What is the research work on sodium sulfur battery?

Advanced battery constructions appeared since the 1980s. Previously, the research work on sodium sulfur battery was mainly focused on electric vehicle application, main institutions engaged in the research include Ford, GE, GE/CSPL, CGE, Yuasa, Dow, British Rail, BBC and the SICCAS.

What is the research work on sodium sulfur battery in China?

The research work on sodium sulfur battery in China was dated back to the 1970s, but since 1980, SICCAS has become the only Chinese institution engaged in sodium sulfur battery research. Systematic research work has been carried out on beta-Al<sub>2</sub>O<sub>3</sub> ceramics and battery as well as module.

Can sodium sulfur battery be used in Japan?

On September 2002, AEP hosted the first demonstration project in USA, DOE and NYSERDA joined in a three year program to demonstrate sodium sulfur battery system as large as 1.2 MW/7.2 MWh from NGK for electric energy storage in 2004, indicating the possibility for the commercial application of sodium sulfur battery other than in Japan itself.

What is a NaS battery energy storage system?

In March, 2001, a 400 kW NAS battery energy storage system was integrated with a 500 kW wind generator to stabilize both short and long term fluctuations. Power from NAS batteries is stored or injected at high frequency such that net output is constant.

This paper presents comprehensive numerical results and analysis quantifying the ability of NaS battery energy storage to reduce global wind power curtailment levels in Crete's ...

Proven energy storage technology for high power, large energy capacity. Fully commercially available technology (large manufacturing capacity) Uses only common materials (Sodium and Sulfur). No rare materials used ?Can store energy up to 7 hours ?Prompt response -full power charge to discharge in 2 milliseconds

# Sodium-sulfur battery demonstration energy storage power station

The pumped storage power station is the most mature and widely used large-scale energy storage technology. It has the strengths of large capacity (1 million kW), long life, and low operating cost. However, the construction of a pumped storage power station is constrained by geographic conditions, and it needs suitable upper and lower reservoirs.

It will be used by Korean Electric Power Company (KEPCO) in a project to compare performance of different stationary energy storage batteries at a testing site run by the utility in Naju City, Jeollanam-do Province. Other ...

A megawatt-scale sodium-sulfur (NAS) battery demonstration project involving South Korea's largest electric utility has gone online. ... in South Korea in partnership with power-to-gas company G-Philos. NGK to install sodium-sulfur ...

the Electric Power Research Institute (EPRI) and the U.S. Department of Energy, plans to install an advanced battery energy storage system (BESS) at the LIB facility located at 700 Commercial Avenue, Garden City, New York. The BESS will shift the electrical demand of the facility's natural-gas bus refueling compressor station

A commercialized high temperature Na-S battery shows upper and lower plateau voltage at 2.075 and 1.7 V during discharge [6], [7], [8]. The sulfur cathode has theoretical capacity of 1672, 838 and 558 mAh g<sup>-1</sup> sulfur, if all the elemental sulfur changed to Na<sub>2</sub>S, Na<sub>2</sub>S<sub>2</sub> and Na<sub>2</sub>S<sub>3</sub> respectively [9] bining sulfur cathode with sodium anode and suitable electrolyte ...

By Xiao Q. Chen (Original Publication: Feb. 25, 2015, Latest Edit: Mar. 23, 2015) Overview. Sodium sulfur (NaS) batteries are a type of molten salt electrical energy storage device. Currently the third most installed type of energy storage system in the world with a total of 316 MW worldwide, there are an additional 606 MW (or 3636 MWh) worth of projects in planning.

In 2013, Japan's New Energy and Industrial Technology Development Organization (NEDO) conducted the development of route planning aiming at all types of battery energy storage techniques, which paid special attention to the development of techniques, e.g., lithium-ion (Li-ion) batteries, sodium-sulfur batteries and advanced batteries [8].

Sodium-sulfur (NAS) battery storage units at a 50MW/300MWh project in Buzen, Japan. Image: NGK Insulators Ltd. ... The energy sector accounts for the major share of greenhouse emissions, so replacing polluting ...

The NAS battery is made by Japan's NGK and Germany's BASF and is to be installed by Queensland company Allset, which built the country first sodium sulphur battery (1.5 MWh) at the Nova nickel ...

# Sodium-sulfur battery demonstration energy storage power station

The NAS Battery System will be installed at the Noshiro thermal power station in Northern Japan. The power station is owned and operated by Tohoku Electric Power and was not damaged during the earthquake. The generating capacity of Noshiro thermal power station is 1,200 MW. Power Station. Figure 3: Location of Noshiro Thermal Power Station. 3.3 ...

A megawatt-scale sodium-sulfur (NAS) battery demonstration project involving South Korea's largest electric utility has gone online. Operational start of the ...

The charging time of the sodium-sulfur battery is 4-5 hours. Their lifespan is longer than the life of the lead-acid battery. The substances used in the structure of this battery are harmful to health. Sodium-sulfur batteries provide high energy density of 110 ...

Proven energy storage technology for high power, large energy capacity. Fully commercially available technology (large manufacturing capacity) Uses only common materials (Sodium and Sulfur). No rare materials used ?Can store energy up to 7 hours ?Prompt response - full power charge to discharge in 2 milliseconds

This paper is focused on sodium-sulfur (NaS) batteries for energy storage applications, their position within state competitive energy storage technologies and

It is China's first sodium-sulfur storage energy. Power station engineering application demonstration project. Under the cooperative efforts of the Haichongming Power Supply Company of the State Grid, the State Grid Institute of Hydroelectric Power, the Nanjing Branch of the Chinese Academy of Electric Power and other fraternal units, in mid ...

NGK Insulators has switched on 1 MW/5.8 MWh of NAS batteries under a demonstration project to assess the performance of stationary storage at a site operated by Korea Electric Power Corp....

A megawatt-scale sodium-sulfur (NAS) battery demonstration project involving South Korea's largest electric utility has gone online. Operational start of the 1,000kWdc/5,800kWhdc NAS battery storage system made by ...

Tag. Advantages and disadvantages of flywheel energy storage Asia's largest supercapacitor application project Basic raw materials for lithium-ion battery materials Benefits of pumped storage power plants to China China's largest off-grid integrated microgrid system China's mainstream energy storage battery manufacturers Comparison of different energy storage ...

2.2 Sodium-sulfur battery. The sodium-sulfur battery, which has been under development since the 1980s [34], is considered to be one of the most promising energy storage options. This battery employs sodium as the

# Sodium-sulfur battery demonstration energy storage power station

anode, sulfur as the cathode, and  $\text{Al}_2\text{O}_3$ -beta ceramics as both the electrolyte and separator. The battery functions based on the electrochemical reaction between ...

The Japan Aerospace Exploration Agency's ground station, MDSS, has been equipped with a sodium-sulfur (NAS) battery-based energy storage system, provided by Japanese company NGK Insulators. This article ...

Several large-scale high-energy battery technologies hold promise of providing economical energy storage for a wide range of these power system and energy management applications. This panel paper presents attributes of the sodium sulfur battery, possible applications, system design considerations and describes the first US demonstration.

NGK Insulators will supply a sodium-sulfur (NAS) battery storage system to a project for utility Sala Energy in Japan's Shizuoka Prefecture. ... and commercial and industrial (C& I) customers. Sala Energy intends to use the ...

Sulfur Charge Load Power source  $\text{Na Na}^+$  Discharge Sodium (Na) Charge Beta Alumina Sulfur Cell Structure Chemical Reaction  
 nSodium Sulfur Battery is a high temperature battery which the operational temperature is 300-360 degree Celsius (572-680  $^{\circ}\text{F}$ )  
 nFull discharge (SOC 100% to 0%) is available without capacity degradation.  
 nNo self-discharge

NGK's sodium-sulfur (NAS) battery is an advanced energy storage system developed for power grid applications. Megawatt scale NAS Battery Systems were first ...

Proven energy storage technology for high power, large energy capacity. Uses only common materials (Sodium and Sulfur). No rare materials used. ?Uses ceramic for electrolyte. No self ...

Japan, USA, and China rank in the top 3 on the ranking of the installed capacity of electrochemistry energy storage. In Japan, sodium-sulfur battery energy storage is the main electrochemical energy storage technology, and its technological level is world-leading, but it is seldom used in other countries (only applied in the USA, UK, and ...

The Zhangbei energy storage power station is the largest multi-type electrochemical energy storage station in China so far. The topology of the 16 MW/71 MWh BESS in the first stage of the Zhangbei national demonstration project is shown in Fig. 1. As can be seen, the wind/PV/BESS hybrid power generation system consists of a 100 MW wind farm, a 40 MW ...

With sodium's high abundance and low cost, and very suitable redox potential ( $E(\text{Na}^+ / \text{Na}) \approx -2.71$  V versus standard hydrogen electrode; only 0.3 V above that of lithium), rechargeable electrochemical cells based on sodium also hold much promise for energy storage applications. The report of a high-temperature solid-state sodium ion conductor - sodium v? ...

# Sodium-sulfur battery demonstration energy storage power station

This paper presents an overview of the first U.S. demonstration of stationary sodium sulfur (NAS) battery energy storage technology hosted by the American elect

Grid stabilization, or grid support, energy storage systems currently consist of large installations of lead-acid batteries as the standard technology [9]. The primary function of grid support is to provide spinning reserve in the event of power plant or transmission line equipment failure, that is, excess capacity to provide power as other power plants are brought online, ...
