

What are the different types of energy transformation in Equatorial Guinea?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Equatorial Guinea for 2022. Another important form of transformation is the generation of electricity.

Does Equatorial Guinea produce natural gas?

Through partnerships with neighboring producers including Cameroon, Nigeria and the Republic of the Congo, Equatorial Guinea not only processes its own resources but regional reserves, converting gas into liquefied natural gas (LNG), ready for export.

Is biomass a source of electricity in Equatorial Guinea?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Equatorial Guinea: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Will Equatorial Guinea reinvest oil revenue into agriculture?

Although pre-independence Equatorial Guinea counted on cocoa production for hard currency earnings, the neglect of the rural economy in the years of oil bonanza has diminished potential for agriculture-led growth. However, the government has stated its intention to reinvest some oil revenue into agriculture.

Where are Equatorial Guinea's Natural Resources processed?

In addition to processing domestic resources from fields including the 580 billion cubic feet offshore Alen Gas Project, Equatorial Guinea's Alba Liquefied Petroleum Gas and Punta Europa onshore facility serve as the official processing platform for the entire region.

How will GEF-funded climate mitigation work in Equatorial Guinea?

This first ever GEF-funded climate mitigation project tackles the key sector of Equatorial Guinea's economy. The country's current focus is on increasing hydrocarbons and large-scale power for exportation, but this intervention is expected to prompt a paradigm shift towards smaller-scale investments to boost production for local consumption.

With European nations considering cutting off all gas imports from Russia in light of imposed sanctions on the eastern European giant, Equatorial Guinea could be the solution the bloc needs. Developing its own gas resources as well as those from the wider region, the country can leverage its already strong LNG export networks, increasing LNG ...
