

For connecting your energy storage system, use pluggable battery connections via busbar connection or battery pole connector. Phoenix Contact offers solutions for applications up to 1,500 V, allowing you to install your systems quickly, safely, and cost-effectively.

To connect a busbar to an energy storage system, use connectors that simplify the installation of slide-in systems. These connectors, with reverse-polarity protection, are plugged onto the rear side of a storage system and are suitable for system voltages up to 1,500 V.

DC connectors are especially suitable for use on battery inverters in home storage applications. Protected against polarity reversal, they prevent mismatching in common PV connection technology and battery-pole short-circuits. Energy storage systems enable the self-consumption of renewable energy regardless of when it is generated.

Special connection technology optimized for use in storage systems is required to connect these systems quickly, safely, and efficiently. This includes busbar connections and battery-pole connectors, which are safe and cost-effective.

THB as one of the pioneers of vehicle electronic systemis committed to the design and manufacture high speed and high &low voltage wire harness for intelligent connected vehicles.

Special connection technology optimized for use in storage systems is required to connect these systems quickly, safely, and efficiently. This is necessary to support the integration of renewable energy into the power grid and to alleviate the load on power grids.
