Will 2024 be a good year for battery energy storage?

Among many things, 2024 will probably remain a marker for the momentum built up for Battery Energy Storage Systems (BESS). So sharp has been the pick up here that even countries like the UK which had special focus on Pumped Hydro Storage (PSP) have changed rules in recent weeks to allow BESS projects to fill key energy storage needs.

When can battery storage be used?

Storage can be employed in addition to primary generation since it allows for the production of energy during off-peak hours, which can then be stored as reserve power. Battery storage can help with frequency stability and control for short-term needs, and they can help with energy management or reserves for long-term needs.
