What is the biggest investment in a stationary storage technology startup?

Gross threw in technological advancements that had already matured in other industries -- machine vision, concrete fabrication, cranes -- and came up with a wholly original grid storage concoction. That vision landed the biggest-ever investment in a stationary storage technology startup: \$110 million from SoftBank last summer.

How does long-duration energy storage affect marginal electricity prices?

The total (a), regional (b), hourly (c), and monthly (d) distributions in the mean marginal electricity prices as the amount of mandated long-duration energy storage (in TWh) increases. Increases up to 20 TWh significantly decrease the variability in marginal prices while increases beyond 20 TWh have a lesser effect.
