Why is power reserve important in a self-winding watch?

Power reserve is important in two ways. In a self-winding watch, when you're wearing it, you don't need a long power reserve because you're constantly winding it with your own movements, and even the minimum power reserve of 38 hours is plenty enough to keep it going when you take the watch off to go to bed.

Why does Panerai have a long power reserve?

The long power reserve is a Panerai characteristic dating back to its watches made for Italian navy commandos between the late 1940s and early '50s, at which time the brand wasn't making its own movements and used a hand-wound Angelus movement, the Angelus SF 240.
