

Can the Isle of Man rely on gas and oil?

It's clear that like all leading economies the Isle of Man cannot rely on gas and oil indefinitely. While the island's target to achieve net-zero by 2050 may seem far away, most of us worry about the current price of energy. Graph showing options to generate renewable power, store energy and utilise power on the Isle of Man.

Can the Isle of Man provide stabilising power to GB or ROI?

Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export. These options have not been explored in the analysis.

Is the Isle of Man suitable for an offshore wind farm?

Imvros Ltd and the Isle of Man Government signed an Agreement for Lease at the end of 2015, giving Imvros Ltd the right to investigate an area within the Isle of Man Territorial Seas, approximately 6-12 nautical miles off the east coast of the Island, to determine its suitability for an offshore wind farm.

Can the IOM become a net exporter of energy?

Once sufficient renewable capacity is developed, driven by offshore wind and behind-the-meter solar capacity, the IoM again has the potential to become a net exporter of energy from excess power generated by renewable sources. An alternative scenario 4 was also developed to satisfy 100% of the island's power demand through on-island generation.

Will the Isle of Man be short of baseload power?

Both UK and RoI are predicted to become short of baseload power over the next decade. Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export.

How has electricity demand changed on the Isle of Man?

The annual electricity demand on the Isle of Man has gradually declined since 2012. Between 2012 and 2019, annual demand decreased by 17 GWh, or approximately 5%. The drop in annual electricity demand has been driven by decreases in residential and commercial demand; however, industrial demand has increased.
