Is energy storage a viable option for South Africa's power system?

In the longer term, however, at higher levels of variable generation, flexibility requirements will significantly increase demanding interventions to ensure secure and cost-efficient operation of the South African power system. Energy storage was specifically noted to be highly suitable for this purpose.

Can stationary energy storage solve South Africa's power system challenges?

While the potential of stationary energy storage to address the existing power system challenges, are high in South Africa, the current uptake of the technology is limited to customer-sited, behind-the-meter applications (largely for back up services).

What are the applications of mechanical energy storage systems?

These include deployment of hybrid energy storage technologies, multi-functional applications of mechanical energy storage systems through appropriate control methodologies and proper sizing strategies for cost effectiveness and increased penetrations of renewable energy sources in the power grid. Block diagram of mechanical energy storage systems.

Is there a classification for energy storage in South Africa?

As it stands, however, there is no specific classification for energy storage and a very limited regulatory framework particular to energy storage in South Africa (Werksmans Attorneys, 2018).

What are mechanical energy storage technologies?

In this service, mechanical energy storage technologies, such as PHS, CAES, and GES are used to store energy during the time of excess production of power and to inject back energy into the grid during limited generation of power. In this service, power is delivered by the storage technology for several hours.

What are the three types of mechanical energy storage systems?

The three main categories of mechanical energy storage systems are FESS, PHES and CAES. FESS is based on storing energy for short durations in the form of kinetic energy by using a rotating mass. Indeed, it has the fastest response where it can discharge huge amount of power in few minutes however its capacity is very limited.
