

How does a Uni-Solar photovoltaic cell work?

Each UNI-SOLAR photovoltaic cell utilizes unique triple-junction technology. Blue, green and red lights of the solar spectrum are absorbed in different layers of the cell, yielding unprecedented performance. This light spectrum splitting capability is the key to higher efficiency, especially at lower insolation levels and in diffused light.

Who is Uni-Solar?

UNI-SOLAR is the world leader in flexible solar modules. As part of the American technology leader in renewable energies, Energy Conversion Devices, Inc. (ECD) (Nasdaq: ENER), we can draw on extensive and fundamental know-how from materials and production technology to the final product.

What are the advantages of photovoltaic technology?

Because photovoltaics convert sunlight directly into electrical power, this technology offers important advantages compared to other renewable energies, such as silent operation, no moving parts, zero emission, no storage of hazardous fuels, long lifetime, low maintenance, no operating costs and unattended operation.

Specially designed to achieve PV & energy storage combination and backup power supply. It integrates PCS, BMS, EMS, and other parts. Elecod ESS connects PV, local loads and mains ...
