How good is Vietnam's energy system?

According to the World Energy System Index for the period 2018-2022, Vietnam held the following positions: 83rd place (2018), 91st place (2019), 65th place (2020), 61st place (2021), and 55th place (2022). Despite fluctuations, the overall trend is positive, indicating significant improvement in Vietnam's energy system performance over five years.

What is Vietnam's potential hydropower capacity in the future?

According to global hydropower experiences, Vietnam's potential hydropower capacity in the future could range between 30,000 MW and 38,000 MW, with electricity production reaching 100 to 110 million MWh. (2) Solar energy

Does Vietnam have oil-fired thermal power plants?

Kuwait stands as Vietnam's primary crude oil supply market, constituting nearly 90% of the total. Despite the considerable oil production, the mastery of oil refining technology remains lacking. Consequently, oil-fired thermal power plants in Vietnam face numerous limitations. They generated only 1267 thousand MWh in 2023.

What are Vietnam's development prospects for coal-fired and hydropower plants?

Coal-fired and hydropower plants currently account for the majority of the energy supply to Vietnam's power grid, but most research reports believe that the development prospects for coal and hydropower are poor [5, 9, 12].
