The power losses with 230 V DC are slightly lower than corresponding values for 230 V AC and the 311V DC is better. Therefore, this work proposes a topology with two voltage levels the 230V and 311V as a DC bus for all types of household appliances for PV-based with battery storage applications.

In contrast, high voltage batteries can be connected via a bidirectional DC-DC converter that acts as a boost or buck converter [93]. Generally, the smaller the voltage difference between the battery storage and the DC link, the higher the conversion efficiency of the power electronics during charging and discharging [63], [95].
