

What is a water storage tank?

A water storage tank is an integral part of many household water systems. It can range from a small 5-gallon tank to a large outdoor atmospheric tank that can store thousands of gallons of water.

What are the different types of water storage tanks?

There are more options today than there ever have been. Each water storage tank has its benefits and disadvantages over the others. Pressure tanks are the most common water storage tank. In fact, nearly every single well water system has at least one. These tanks fill with water from the well and store that water under pressure.

What can fiberglass tanks store besides water?

Aboveground fiberglass tanks are for storing caustic water. This includes waste, potable, and rainwater storage. If you need storage for liquids other than water, these tanks work for that, too. They may not hold millions of gallons, but they do exactly what they're needed to do.

How does a water storage system work?

This is very common with vineyards, homes with large landscapes, or farms. In this case water storage could be used to store up the water from the source and then a very high output pump is installed on the tank to supply the pressure and volume needed for the irrigation system.

What is an underground water storage tank?

An underground water storage tank, also known as a water cistern, is used to safely store potable drinking water underground. These tanks can hold thousands of gallons of water for agriculture or a few hundred gallons to support the water needs of a small home.

Does a water storage tank need a pressure tank?

Because storage tanks do not pressurize water, a home with one of these tanks will still need a pressure tank. An additional pressure pump is necessary between the storage and pressure tanks to provide the home's water pressure.

SBS® Tanks water storage tanks can be used to store water for irrigation, on-farm processing, animal husbandry, drinking water and for fish farming. Water Conservation Climate change, population growth and rapid ...
