What are the goals of the energy storage safety workshop?

The goals of the workshop were to: 1) bring together all of the key stakeholders in the energy storage community, 2) share knowledge on safety validation, commissioning, and operations, and 3) identify the current gaps in understanding, managing, standardizing and validating safety in energy storage systems.

What is the energy storage protocol?

The protocol is serving as a resource for development of U.S. standards and has been formatted for consideration by IEC Technical Committee 120 on energy storage systems. Without this document, committees developing standards would have to start from scratch. WHAT'S NEXT FOR PERFORMANCE?

What are testing items and procedures?

Testing items and procedures, including type test, production test, installation evaluation, commissioning test at site, and periodic test, are provided in order to verify whether ESS applied in EPSs meet the safety and reliability requirements of the EPS.

What are the requirements for a reg system inspection?

Completeness of the documentation and its correspondence with the REG system on-site, as per SEC's inspection checklist. Inspect the presence of Interface Protection and required switches. Witness Compliance test to be performed if necessary, during cold commissioning. Temporary connection granted (known as "Limited Operational Notification").

What is a periodic ESS test?

Periodic tests aim to inspect operation safety and reliability of ESS, which shall be periodically carried out after ESS have been officially applied in EPSs. The measured and analyzed results of each test obtained by applying the standard shall be repeatable, traceable, and independent from the test environment and location.

The Fuel cells as compared to the other energy storage media have shown promising preliminary outcomes as the energy density of fuel cell is higher than the batteries (Muthukumar et al., 2021). Yet, the production of hydrogen, which is used in fuel cells, can involve GHG emissions, particularly if derived from fossil fuels (gray hydrogen).
