Could a 10 hour energy storage system help stabilize power supplies?

Researchers are working on improving energy technologies to allow for electric energy storage systems to supply power for 10 hours or more, which could further stabilize power supplies as more renewable energy sources come online.

What is energy storage?

Energy storage is the capturing and holding of energy in reserve for later use.

How can energy storage help stabilize power flow?

Energy storage projects can help stabilize power flow by providing energy at times when renewable energy sources aren't generating electricity, such as at night for solar energy installations or during calm days for wind turbines. How long can electric energy storage systems supply electricity?

What makes the energy storage system 'discharge' power?

The energy storage system "discharges" power when water, pulled by gravity, is released back to the lower-elevation reservoir and passes through a turbine along the way. The so-called battery "charges" when power is used to pump water from a lower reservoir to a higher reservoir.
