What are the different types of battery storage solutions?

A number of battery storage solutions are available, ranging in size from a split system air conditioner to a fridge. They use different technologies and store varying amounts of energy. Lead-acid batteries are typically larger than lithium batteries.

What is the difference between rated power capacity and storage duration?

Rated power capacity is the total possible instantaneous discharge capability of a battery energy storage system (BESS), or the maximum rate of discharge it can achieve starting from a fully charged state. Storage duration, on the other hand, is the amount of time the BESS can discharge at its power capacity before depleting its energy capacity.
